PROJECT PROPOSAL

Parcel Delivery Digitization Solution

Submitted to: Kangemi Matatu Owners (KMO) SACCO

Submitted by: TrimLine Systems & Solutions

Date: Friday, June 13, 2025

1. Introduction

As KMO SACCO continues to serve its community through dependable transport, there is an opportunity to extend this excellence into parcel delivery — through a simple, modern, and secure digital system.

TrimLine Systems & Solutions proposes the development of a **custom Parcel Delivery App**, specifically designed for your booking agents, parcel clerks, and clients — making it easier to book, track, and deliver packages efficiently and professionally.

2. Why Digitize Parcel Services?

Currently, manual parcel booking and delivery tracking can lead to:

- Misplaced or delayed packages
- Limited communication with customers
- Inability to track performance or delivery status
- Increased customer complaints and revenue losses

A mobile-driven solution helps eliminate these issues with automation, accountability, and real-time communication.

3. Proposed Solution Overview

We propose a smartphone app that your booking agents will use at both sending and receiving points.

Key Capabilities:

- **Booking Entry:** Agent captures sender and receiver details, destination, driver and vehicle info
- **Payment Collection:** Customer pays via **cash or MPESA**
- **SMS Alerts:** Both sender and receiver are notified when payment is made, and when the parcel arrives
- **Status Tracking:** Agents update parcel status (Sent → Arrived → Collected)
- **Digital Records:** All bookings and updates stored for reference and reporting

This system will be tailored to your workflow, ensuring smooth onboarding for your staff and customers.

4. Project Timeline

We propose a **2-month** development period for a working prototype and final system. This includes:

Phase	Duration
Requirements & Design	2 weeks
Development	4 weeks
Testing & Feedback	1 week
Deployment & Onboarding	1 week

5. Investment Estimate

Item	Cost
One-time Implementation	KES 100,000
Monthly Support & Maintenance	KES 15,000

Note:

- This includes updates, minor feature improvements, and support.

- MPESA and SMS gateway usage costs billed separately depending on volume.
-

6. What's Next

If KMO SACCO is open to exploring this opportunity, we would appreciate your expression of interest so we can align timelines and plan resources accordingly.
