Communication On Steroids

USSD API

The API works by making HTTP post requests to the registered callback URL. The parameters are as shown:

Parameter	Description
sessionId	A unique string identifier generated by the USSD gateway
serviceCode	USSD code assigned to the client
phoneNumber	MSISDN of the subscriber dialing the code
text	Text input entered by the subscriber

To end a session prepend the response with END, for example,
END You will get feedback via SMS shortly

To continue a session, prepend the session with CON, for example,
CON Enter your phone number
